Possibilities
Of Our
Aluminium Roofs

We understand that customers' tastes and requirements can vary enormously. Your new aluminium roof, whether it is for an orangery, an extension or a conservatory must be attractive, distinctive, sympathetic and of course affordable. Workmanship and materials must be of the highest quality; it should also be practical, able to withstand all weather conditions, and stay looking perfect with the minimum need for maintenance. We take care to listen to customer requirements, in order to make your dreams into a reality.

Our high quality and high performance aluminium and glass roof system is uniquely versatile and adaptable, making it perfect for both the domestic and commercial markets. It has been designed to provide maximum glass area and let in as much natural light as possible. Our roofs will transform any space, and make it a brighter, more open and more welcoming space in which to spend your time.

Why Choose Aluminium?

There are many reasons why aluminium is a better material when making roofs compared to other materials.

Aluminium as a material can be customised in a wide range of colours and special textured paints as well as gloss, semi gloss or matt finishes.

Due to aluminium being a metal it offers great strength as a material which means we can create slimmer sight lines while maximizing glass area. This is not possible with a lot of other materials as they cannot support the load of large glass units.

Unlike other materials aluminium does not expand and contract as much in hot & cold weather, if at all; especially when compared to other materials.

The life span of an aluminium product is measured in decades rather than years.

Aluminium is arguably the most sustainable building material in the world and is also highly recyclable. The recycling process creates high quality aluminium which loses none of the physical properties, meaning that it can be endlessly recycled for use as new products without losing quality. Recycled aluminium also uses just 5% of the energy it takes to create primary aluminium.

All Aluminium Roof System

Slim Flat Roofs

The Elegance Roof

Slim & Stylish **Aluminium Roofs**

The superior natural strength of aluminium allows for a much larger glazed area with the structural integrity and strength to take several inches of snow and wind speeds of more than 100mph. This roof system is an energy efficient thermally broken system that is suitable for both commercial and domestic purposes.

Our roofs can be glazed with polycarbonate sheeting or high performance glass sealed units. The slim unobtrusive frames give you an elegant and aesthetically pleasing roof that can be polyester powder coated in almost any colour you desire and will remain in a pristine condition for years to come with minimal maintenance required.

Key Features

- Over 200 single or dual RAL colours.
- Also available in a range of textured colours upon request.
- 'Polyamide' thermally broken profiles for superior efficiency.
- Can be supplied unglazed or glazed for 28mm units.
- Range of styles & designs available to suit every application.
- Exceeds current building regulations.
- Ideal for new build, replacement and refurbishment projects.
- Suitable for commercial or domestic projects.
- Optional solar controlled glass available.
- Self cleaning glass available for hard to reach areas.
- Roofs can be pitched from 5 - 45 degrees.
- All roofs provided with flat ridge covers (crested available upon request).
- Opening manual or electric vents available.
- Electric vents can be fitted with a combined heat & rain sensor.
- Virtually maintenance free and built to last - remaining in a pristine condition for years to come.
- Window up-stands available for most roof styles.
- Range of windows and doors designed to co-ordinate with our roof system to create conservatories and orangeries.
- Box gutters available for certain roof combinations.
- Aluminium guttering available upon request.
- Expert support & specialist on-site instruction service available.
