**DURATION WINDOWS**

Supplying high quality aluminium products since 1985

## A Revolutionary Idea

Integrated blinds are Venetian style blinds that are actually installed **INSIDE** the double glazed sealed unit. Our integrated blinds are manufactured to the internal size of the sealed unit, fitting neatly between the two sheets of glass. The slat raising and lowering functions are achieved using an internal motor powered by an electronic control unit, thereby guaranteeing the unit's hermetic seal.

This patented high performance low voltage electronic system utilises a wireless magnetic transmission plate. Simply place the control unit (battery powered remote) onto the magnetised plate and using the up and down arrow buttons simply raise, lower and tilt the blinds, and with surprising speed.

## Features

- Venetian style blinds with high quality 12.5mm aluminium slats.
- All units are made to measure, and can be installed into new or existing door systems.
- Installed inside the sealed unit - between the two sheets of glass.
- No unsightly cords, giving clean lines and anti-ligature aspects.
- Stylish rechargeable battery powered control unit (remote) - easily and quickly raises, lowers and tilts the blinds.
- Available in a large range of colours and finishes.
- Ease of installation - no need for an electrician.
- Can be fitted into doors as large as 3 metres high and 1.2 metres wide. (32mm sealed units of up to 2.8 meters high)
- Dust and germ free. Ideal for allergy and asthma sufferers.
- Maintenance free - never need cleaning or dusting.
- There is no need for conventional blinds, nets or curtains, which limit access to your window and clutter your window sill.
- Pristine appearance at all times. Protected from physical and wind damage by being encapsulated within the sealed unit.
- Materials used are specifically designed for use inside of sealed units - i.e. they will not "fog" the unit.
- 10 year guarantee.

## Available Colours

## A Problem Solved

Having blinds incorporated into your sealed units allows a room to have both privacy and protection from bright sun light without blocking out the natural light or the view. Blinds provide perfect protection from the sun light while still allowing light into a living or working space. The blades effectively diffuse the light and obscure the vision of prying eyes. If you don't want opaque glass that will constantly impair the clarity of your view, then integrated blinds are for you! The advantage of having your blinds within your sealed units is that they don't require the constant dusting and maintenance associated with conventional blinds.
