

## There are two main considerations when choosing secondary glazing:

**Firstly** - you need to look at the existing window and note how it opens and see if there are bars going vertically or horizontally through the window. If you have a sash window that slides up and down then the sash window will have a horizontal bar half way down the window. In this instance our vertical sliding secondary glazing can be made to match these windows - with the horizontal bar in the same place as that on the existing window. With the bars on both the existing and secondary windows aligned - the secondary glazing blends in with the existing window. We have horizontally sliding units, vertical sliding units, lift out units, hinged units and fixed units - so that we can match any existing window.

*Figure 1.0: shows a traditional aluminium box sash window which has horizontal bars. Vertical Sliding secondary glazing could be made to sit behind this window discreetly.*

*Figure 1.1: shows a Georgian style three pane casement window, which has many vertical bars. Horizontal Sliding secondary glazing can be made to sit behind this window discreetly.*

**Secondly** - you will need to decide which of our secondary glazing systems you require. Bearing in mind the fact that, certain styles are unavailable in some of our secondary glazing systems. For example: Our Triple Track Horizontal Slider is only available with our Luxury Subframe system. The four systems available are our Economy Odd Leg system, our Slim-line Equal Leg system, Luxury Subframe system and our Heavy Duty system.

**Economy Odd Leg**

**Slim-line Equal Leg**

**Luxury Subframe**

**Heavy Duty**

See page 2 for a comparison of each of these systems.

# Secondary Comparison

		Economy	Slim-Line	Subframe	Heavy Duty
Price	Standard White	★★★★★	★★★★★	★★★★☆	★★★☆☆
	Brown (+10%)	★★★★★	★★★★★	★★★★☆	★★★☆☆
	Silver (+10%)	★★★★★	★★★★★	★★★★☆	★★★☆☆
	RAL (+25%, +£125 surcharge)	★★★★★	★★★★★	★★★★☆	★★★☆☆
More Stars = Better Price
